一、本周说明

本周完成了微服务开发环境的搭建与检查，在 Ubuntu 26.04、WSL 2 和 Docker Desktop 环境中配置了 Java、Maven、Git 与 Docker。通过环境验证和 hello-world 测试，确认编译、版本控制、容器运行及 Docker Compose 均可正常使用。同时创建了公开 GitHub 仓库，并整理了环境检查、概念理解、问题处理与提交记录。

二、环境检查

三、容器运行验证

```
hyj@01: /mnt/c/WINDOWS/system32$ docker run --rm hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (amd64)
3. The Docker daemon created a new container from that image which runs the
   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
   to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash
